HOW TO GROW BULBS:—

In this special Fall Bulb Planting List you will find a complete selection of the World's Best Bulbs for Fall and Winter planting in the South. These choice bulb roots are shipped direct to Van Antwerp's by the leading bulb growers in Holland, France, Japan and California.

When planting bulbs in the garden loosen up the soil well. If it is wet or heavy soil, put a handful of sand under the bulb for drainage. Bonemeal mixed with the soil or put on the earth over the bulb will assure you of extra fine flowers. For outdoor planting we recommend putting out bulbs in October and November.

Hyacinths, Tulips, Narcissus, and similar large bulbs should be planted from four to six inches deep, smaller bulbs such as Crocus, three inches deep. Most bulbous flowers bloom in March and April when planted in Fall.

For house culture there is nothing more beautiful than a bowl of sweet-scented Paper-White Narcissus, California Freesia or Chinese Sacred Lilies. These bulbs can be started indoors in pots of soil, pebbles or Bulb Fibre.

Van Antwerp's Prepared Bulb Fibre is a complete substitute for soil, scientifically prepared for use in receptacles without drainage. It is clean and odorless; no saucers necessary, no fear of staining the woodwork or table coverings. And bulbs really grow better in it than in soil, for it absorbs and holds an even moisture, and on account of its fluffiness allows the roots to penetrate freely.

Van Antwerp's Exhibition Hyacinth Bulbs

This size of bulb is known as "top-roots," the largest size of Hyacinths imported into this country from Holland. They are the bulbs that are grown for those massive spikes of bloom you see exhibited at national Flower Shows.

THE WORLD'S BEST BULBS FOR FALL PLANTING

TULIPS

For outdoor planting Tulips are exceedingly effective and are perhaps the most popular of all Dutch bulbs, but, unfortunately, they do not stand our Southern climate as well as the Narcissus or Daffodil. The Giant Darwin Tulips are the only varieties of tulips that will grow successfully in Southern states. The Single and Double Early Tulips which are popular in the North are not satisfactory in the South.

Tulip Bulbs should be planted 3 inches deep and about 6 inches apart. Remember you get the finest bulbs that Holland produces and the usual high grade Van Antwerp quality.

SATSUMA AND PECAN TREES From The Famous CAROL PLANTATION

Order Now—Shipment in December

We have arranged to supply our customers with Satsuma and Pecan Trees, also Kumquat Bushes, from the nurseries of the famous Carol Plantation, near Mobile. Send your orders direct to Van Antwerp's, and the trees will be forwarded to you as early in December as weather conditions are favorable for planting.

NOTE—No Trees can be shipped to Florida. No Trees sent C. O. D.

SATSUMA TREES

Every home owner in the Satsuma section of the South should have at least a few trees to supply his own needs, and if he has sufficient land for larger plantings, cannot do better than plant Satsumas. The Satsuma is peculiarly adapted to a region extending about 100 to 150 miles back from the Gulf. In this section the fruit ripens long before cold weather comes, and a month before Florida oranges are ready for market. This "kid-glove" orange (which may be peeled and eaten without soiling the fingers) is becoming more popular every year and is now bringing the highest price in Northern markets. This year's crop from the Mobile section will bring hundreds of thousands of dollars and prove the most profitable crop ever harvested. The trees we offer are above the average in quality, and are three-year-old tops on four-year-old roots. They will bear the second season. All budwood was selected from trees bearing high quality fruit. Satsuma trees should be planted 20 feet apart in orchards or 108 trees to the acre. If planted in the home garden (to be worked without field implements) 10 to 12 feet apart. Satsumas require no pruning except to remove any broken or dead limbs, only shallow cultivation required. Price: Satsuma Trees (over 3-4 inch caliper) 35c per tree, 10 trees or over at 30c per tree. Small lots can be sent parcel post at 5c per tree extra for postage and packing... Large shipment by express.

PECAN TREES

The Pecan is recognized the world over as the premier of all nuts in food value and flavor. It is a native of the South, and flourishes here better than in other sections, and it commands the highest price in all markets. The trees we offer here are papershells of well known varieties, graftwood taken from only bearing trees. Trees should be planted 50 to 60 feet apart, and they will begin bearing at four years, and when eight years old should bear at least 10 pounds of nuts per tree if properly cared for. We do not recommend planting trees smaller than the 5 to 7 foot size. We can supply any of the following well known varieties—SCHLEY, STUART, SUCCESS, PABST, MONEYMAKER. Prices: (5 to 7 feet high) \$1.05 each; 7 to 9 feet \$1.15 each. On orders of 100 trees or over a special reduction of 10c per tree.

NOTE—Pecan trees cannot be shipped parcel post. Shipment will be made by express, charges collect. All trees pruned ready for planting.

Carol Plantation:

It is said that "entire satisfaction is a very rare thing," but that is the feeling I have with reference to the Satsuma Trees purchased from you last spring. A very careful examination of the entire planting of over 1,200 trees fails to show a single dead tree, every tree showing excellent growth and strong vitality.

JOHN W. WILSON
Terre Vista Groves
Delchamps, Ala.

Carol Plantation:

The Satsuma trees we purchased from you this season, 4,500 in number, were so satisfactory that I take pleasure in advising you of the fact. The growth and general behavior of these trees is proof of the vigorous and healthy condition of the stock as delivered from your nurseries.

WALTER WEAVER

Carol Plantation:

The Pecan trees I bought from you last winter are doing fine. I will be back next winter for more.

SPRAY YOUR TREES WITH VAN ANTWERP'S INSECTICIDE

Van Antwerp's Insecticide (Schnarr's Improved) is manufactured in our own chemical laboratory and is used extensively throughout the South for spraying all kinds of Citrus fruits and deciduous trees infested with white fly or scale insects. It has been thoroughly tested by expert entomologists and is highly recommended by them as a safe and efficient spray for sucking insects like white fly, maple scale, purple scale, long scale, San Jose scale and oak scale.

In the vicinity of Mobile all the Satsuma orange growers use Van Antwerp's insecticide for their trees and say it's a spray without competition.

For white fly and scale use at the rate of 1 part of this insecticide to 60 parts of water, and for deciduous fruit trees, also pecan trees, use 1 to 20 parts of water.

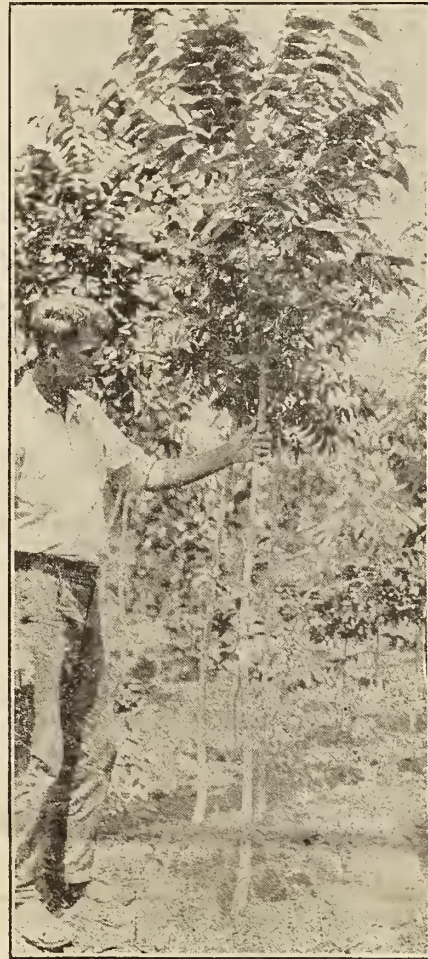

We have this insecticide put up in all sizes, including a small 8-ounce bottle for those who have a few trees in their garden to spray.

Complete instructions for use on every can.

Price: Van Antwerp's Insecticide. Small garden size bottle (8 ozs.) 35c postpaid; half gallon can 85c; 1 gallon can \$1.50; 5 gallon can \$6.75; 10 gallon can \$12.50; 25 gallons \$28.75; 50 gallons \$50. Purchaser pays transportation charges.

KUMQUAT BUSHES

The Kumquat is the smallest of citrus fruits; it can be eaten fresh or in marmalade and jelly. Plant Kumquat bushes eight feet apart in groves or 3 to 4 feet apart in hedges. It makes a beautiful hedge between the front and back yards, growing six to eight feet tall. This is the most profitable method of planting, for the bushes serve a double purpose. Prices: Kumquats (over 3-4 inch caliper) 35c per bush; 10 bushes or over at 30c each. If wanted by parcel post, add 5c per bush for postage and packing. Large shipments by express.
